***TIP:** Buyers can get extra protection and piece of mind by purchasing a home warranty insurance policy. Such policies may also be a way for sellers to protect themselves from post-sale claims by buyers for defects undetected in home inspections.*

- 1** Faulty wiring—open junction boxes, amperage mismatches, no wire nuts on wires.
The cure: Fix junction boxes; upgrade to at least 100 amps.
- 2** Poor grading and drainage—spongy soil around the foundation, signs of leaking in basement.
The cure: Regrade so that grounds slopes away from house for 10 feet; remove porous material around foundation.
- 3** Faulty gutters—clogged or bent gutters, water not channeled away from house.
The cure: Preventive maintenance; gutters of adequate size, splash pans to divert run-off.
- 4** Basement dampness—water stains, powdery residue on walls, mold or mildew.
The cure: Repair gutters to channel water away from house; apply waterproof coatings to basement.
- 5** Roof problems—brittle or curled shingles; broken or missing flashings.
The cure: Apply new shingle, or tear off if needed (usually after three re-roofs); replacing flashings, especially around chimneys and other protrusions.
- 6** Foundation flaws—cracks in foundation, sloping floors, sticking doors or windows.
The cure: Fill cracks with silicon caulking or epoxy; apply waterproof coating to exterior.
- 7** Poor upkeep—needs repainting, worn carpeting, cracked driveway.
The cure: Give the house a minor facelift.
- 8** Faulty plumbing—inadequate water pressure, slow drains, signs of leaks on ceilings.
The cure: Clean and rout drains; reseal toilet with new wax ring, repair leaks.
- 9** Poor ventilation—extreme heat in attic, vapor condensation.
The cure: Ensure that roof soffits are not blocked; install additional roof vents; vent bathroom and kitchen fans outside.
- 10** Defective heating—cracks in the heat exchanger or water tank; carbon monoxide leaks.
The cure: Reseal chimney flues; replace sacrificial anode in water heater.
